

Incremental Development

1st version – The system will be able to differentiate between students, instructors, and admins. Each type of user should be able to print out the available courses/schedule, by semester.

2nd version – Admin will be able to add/remove courses from the system, add/remove users, add/remove students from a course, and search and print rosters and courses.

3rd version – Instructors will be able to print their schedule, print their class list and search for courses

4th version – A student will be able to search courses, add/drop courses, and print their schedule.

Final version – Make everything work together, and each type of user should only be able to access their specific options.
