Incremental Development

1st version: it would be able to tell which user has which title. And they should all be able to see the courses and their schedules.

2nd version: The admin class will have functions that allow them to add courses to the system, remove courses from the system, add/remove users, add/remove student from a course, search and print rosters and courses

3rd version: The student class will have functions that allow them to search courses, add/drop courses, print their schedule.

4th version: The instructor class will have functions that allow them to print their schedule, print their class list, and search for courses.

Final Version : we would combine all these together that way they would be able to user their own titles options.
